## Anterior implants + provisional restorations

A three-day module, designed for dentists who want to upgrade and expand their knowledge on provisionalization and the placement of implants in the anterior region including theory and hands-on practice.

The diagnostic, planning and implementation of complex surgical cases in provisionalization in the anterior region are part of the theoretical and practice programme of this course.

# Course objectives

- + Review current alternatives to implantology in the anterior region.
- + Develop the concepts that lead to peri-implant tissue conditioning through the use of provisional elements:

**Critical & Subcritical Contours.**

A close-up photograph of a dental implant being inserted into a jaw model. The implant consists of a grey, threaded abutment and a polished metal post. The surrounding tissue is pink and realistic.

# Program: Thursday 12

From 09:30 to 17:00

- + Implants in the anterior region: immediate vs delayed.
- + Importance of the volume of tissue: preservation vs regeneration.
- + Soft tissue grafts around implants: how, when and why.
- + *Hands-on* of soft tissue graft around implants.

# Program: Friday 13

From 09:30 to 17:00

- + Basic & advanced concepts on implant provisionalization.
- + Critical & subcritical contour. From basics to complexity.
- + *Hands on* of preparing immediate provisional elements.
- + *Live surgery*.

# Program: Saturday 14

From 09:30 to 14:00

- + *Hands on* in preparing provisional restoration after tissue maturation.
- + Decision-making flow chart on handling complex cases regarding implants in aesthetic areas.
- + New technologies and state-of-the-art solutions.

# Speaker

*Dr. Óscar González Martín*
